DETAILED ACTION

This action is in response to Applicant's amendment filed on 06/30/2008.

Independent claim 1 has been amended with all the limitations of the previously objected (but allowable) dependent claim 4, as well as those of claims 2 and 3.

Dependent claims 2-4 have been cancelled. Allowable **dependent claim 5 has been amended** to now depend on the allowable independent claim 1. Claims 1 and 5-7 are now pending in the present application.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the amended claim 5, the examiner has replaced the deleted character 4 (wherein the-strikethrough line through a single character is not clearly visible, and therefore makes the amendment non-compliant; see MPEP CFR 37 1.121 (c)(2), which states that in order to delete a character string of five or less characters, the character string should be enclosed in double-brackets) by **[[4]]**.

Allowable Subject Matter

Amended claim 1 is allowable. The following is a statement of reasons for the indication of allowable subject matter:

Consider **claim 1**. None of the prior art of the record teaches or fairly suggests all of the claimed limitation of the invention. The best prior art found during the examination of the present application, **Ishizaki et al. (U.S. Patent Publication # 7,085,827 B2)** in view of **Terrell et al. (US Patent Application Publication # 2003/0189936 A1)** fails to specifically disclose the limitation of the connection management apparatus, wherein a sequence of the linked pairs of tags and destination addresses is configured to specify an up-directional connection path of the packet from a client side to a server side or a down-directional connection path of the packet from the server side to the client side, and in the lookup table, the search keys are grouped for each of the users, and in the lookup table the search keys are further grouped for each of an up-directional connection path and a down-directional connection path.

Since all the features of **claim 1** are not disclosed by any of the best available prior art, either alone or in any combination, the examiner considers **claim 1 to be novel and non-obvious and therefore allowable.**

Dependent claims 5-7 are also allowable because of their dependency on the **allowable independent claim 1.**
